AREAS AND CENSUS-FARMS REPORTING CROPS, PROVINCES AND CENSUS DIVISIONS, 1976

This report presents the areas of crops sown for harvest in 1976 and the "census-farms" reporting these crops in the 1976 Census of Agriculture. Individual farm operators were asked to include all crops sown at the date of the census, June 1, 1976 or to be sown for harvest in 1976.

Census-farm — This term is defined in the 1976 Census as a farm, ranch or other agricultural holding of one acre or more with sales of agricultural products during the year 1975 of \$1,200 or more.

This definition differs from that used in previous Censuses of Agriculture. The figures relating to previous censuses in this report were derived using the 1976 census-farm definition.

In the appendix of this report, there is included a table which presents figures to help users evaluate the effect of the change in the 1976 census-farm definition. Additional figures for individual provinces are available on request from Census of Agriculture Division of Statistics Canada.

This report presents area data in metric (hectares) as well as imperial (acres) units. This conversion from acres to hectares was made by Statistics Canada using the factor 0.404 685 6 hectare equals one acre. Where areas are reported in square feet, the metric equivalent used is square metres. The conversion factor is 0.092 903 04 square metre equals one square foot. Some of the metric figures may not add because of rounding.

In some sections of the province of Quebec, the land measure is the "arpent" and respondents reported area data in this unit. The conversion to acres was made by Statistics Canada using the factor 1,000 arpents equal 845 acres.

SUPERFICIES ET FERMES DE RECENSEMENT DÉCLARANT DES CULTURES, PROVINCES ET DIVISIONS DE RECENSEMENT, 1976

Ce bulletin donne les superficies de cultures semées et récoltées en 1976 et les "fermes de recensement" déclarant ces récoltes au recensement de l'agriculture de 1976. Les exploitants agricoles devaient inclure toutes les cultures semées à la date du recensement, le 1^{er} juin 1976, ou qui devaient l'être pour la récolte de 1976.

Ferme de recensement — Ce terme est défini au recensement de l'agriculture de 1976 comme étant une ferme, un ranch ou toute autre exploitation agricole d'une acre ou plus dont les ventes de produits agricoles en 1975 se sont élevées à \$1,200 ou plus.

Cette définition diffère de celle employée aux recensements antérieurs de l'agriculture. Les chiffres relatifs aux recensements antérieurs dans ce bulletin furent calculés en se servant de la définition d'une ferme de recensement en 1976.

Dans l'appendice de ce bulletin se trouve un tableau dans lequel sont présentés des chiffres pour aider l'utilisateur à évaluer l'effet du changement dans la définition d'une ferme de recensement en 1976. Des chiffres additionnels pour chaque province sont disponibles en s'adressant à la Division du recensement de l'agriculture de Statistique Canada.

Ce bulletin présente les données de superficie en unités métriques (hectares) ainsi qu'en unités impériales (acres). La conversion d'acres en hectares a été faite à Statistique Canada en employant le facteur 0.404 685 6 hectare égale une acre. Quand les superficies sont déclarées en pieds carrés, l'équivalent métrique employé est le mètre carré. Le facteur de conversion est 0.092 903 04 mètre carré égale un pied carré. Certains chiffres métriques ayant été arrondis, leur somme peut ne pas additionner aux totaux indiqués.

Dans certaines régions du Québec, la mesure agraire est l'"arpent" et les répondants ont inscrit les superficies suivant cette mesure. La conversion en acres a été faite à Statistique Canada à raison de 1,000 arpents pour 845 acres.

Comprend les données du Yukon et des Territoires du Nord-Ouest.
 Comprend le tourrage vert, le foin ou l'ensilage.
 Cultivés surtout pour la vente.
 Dans les fermes possédant 25 arbres fruitiers ou plus.

Newfoundland
